THE ULTIMATE
SEISMIC SOLUTION

01/17/1994 NORTHRIDGE
EARTHQUAKE AFTER-MATH

QUAKE BRAKES[®]
Seismic Restraint

QUAKE BRAKES[®]
a division of Hamilton Pacific

QUAKE BRAKES[®] by Hamilton Pacific is our pendant seismic restraint system that restrains individual safe deposit box stacks in the event of an earthquake. The system has been analyzed and accepted by structural engineers who work for major financial institutions. The system is not only economical to install they can also be relocated and they then of mergers and closures. The system may be reused and modified when adding, the leading or reconfiguring boxes. One advantage QUAKE BRAKES[®] offers is the low profile installation which requires no drilling of holes, removing or placing of boxes, welding, RAM setting, etc.. This means less dust, noise, and agitation for branch employees and customers.

Hamilton Pacific has tremendous experience in bank equipment installation and bank contracting in the state of California. QUAKE BRAKES[®] seismic restraint system has been installed at over 1500 branches of major banks throughout the state. QUAKE BRAKES[®] is by far and wide the most acceptance deposit seismic restraint system used by the major banking institutions. This experience plus five offices statewide offers the best product and trained installers to solve your safe deposit box seismic problems.
