

Hamilton Pacific

INFORM®

LITEALERT™

1999 Southern California Edison Product of the Year

INFORM® Systems are proven technologies that enable our clients to dramatically reduce their overall energy consumption by as much as 30%.

Wireless Building Controls

Hamilton Pacific's clients realize these savings through reduced usage costs of lighting systems, HVAC systems, and other systems currently controlled by conventional time clocks.

Energy Management

LITEALERT™ is an extension of the Inform Energy Management System. By incorporating LiteAlert's components, compliance with state mandated lighting management is ensured.

Hamilton Pacific's INFORM® **LITEALERT™** system provides remote site notification to a centralized dispatch center when lighting falls below compliance levels.

Remote Programming

Certified **LITEALERT™** experts provide design and implementation programs specific to the individual requirements of each site.

With offices throughout the United States, Hamilton Pacific services any size organization - from single site operations to large multi-state institutions.

State Mandated Lighting Management
